

6.2 Promote Effective Parking Management

10 – 45 Points

Action Updates

This action has been revised for the **current certification cycle**. The previous version of this action is [available for comparison](#). Edits are highlighted in yellow. (Last updated 2024)

Objective

Plan for and implement projects to make existing parking more efficient, reduce parking demand, and encourage walkability.

Complementary Actions:

- [Implement Complete Streets](#)
- [Integrate Sustainability into Plan of Conservation and Development](#)
- [Encourage Smart Commuting](#)

What to Do

The more you do, the more points you earn.

1. Conduct a parking needs assessment. Determine whether to evaluate parking community-wide or in a specific area of your municipality, such as a downtown commercial district, and then prepare a map of the study area. Perform a complete parking inventory, counting the existing on-street and off-street parking spaces in the study area. The survey should also examine the number of cars and turnover rate (determined by recording license plates of all cars in the parking area) for the parking area being assessed. Examine existing parking needs, estimate future demand, and then evaluate and recommend parking strategies that will achieve the parking needs of the municipality. **(10 points)**

Submit: The parking needs assessment (including a statement of purpose and summary of key findings). If your parking needs assessment was completed more than three years ago, also include a brief description of how it is still relevant and used by your municipality.

2. Implement non-regulatory and regulatory parking management strategies. A regulatory parking management strategy must be outlined in municipal zoning, ordinances, or other officially adopted policies. All other parking strategies are considered non-regulatory actions. **(Up to 35 points)**

a. Non-Regulatory Actions **(15 points)**

Choose One per Certification Cycle Non-Regulatory actions must have been implemented or completed in the last three years.

- Without more land or new construction, increase the capacity of parking facilities, such as through connected parking areas, cross-access easements, shared facilities, better striping to clearly define spaces, reducing parking space size, and using underutilized areas of existing parking facilities for small car spaces, motorcycles and bicycles; or
- Implement a paid parking system with a pricing structure intentionally designed to reduce the time spent looking for parking and to promote efficient use of parking spaces and facilities; or

- Create shared parking (i.e., two different entities with different demand times, like a school and a restaurant, share a parking lot).

Submit: A statement of the non-regulatory strategy implemented (including date of completion or implementation), and documentation of implementation, such as photographs, letters of agreement between two entities sharing parking, etc.

b. Regulatory or Policy Actions (20 points)

Choose One per Certification Cycle

- Rather than constructing more parking than is currently necessary, in anticipation of future demand, reduce the amount of impervious surface laid initially by allowing developers to bank land and maintain landscaped areas on the property that can be converted to parking if demand requires it in the future;
- Eliminate parking minimums, establish parking maximums, develop context-sensitive parking standards, unbundle parking from building development requirements, and/or establish fees-in-lieu of parking spaces.

Submit: A statement of the regulatory strategy implemented, and documentation of regulation or policy adoption (such as meeting minutes, a copy of the municipal zoning regulations with relevant portions highlighted, a link to municipal ordinances, or similar verification).

Engaging Partners

Sustainable CT encourages regional collaboration and other forms of partnership. For every action, please complete the "Partners" box in your submission, indicating the name(s) of any municipalities and/or organizations you partnered with (if any) and a brief description of your municipality's role. If you collaborate with other municipalities, each community will receive points. For additional information, please see the "[Partners Guidance Document](#)".

Potential Municipal and Community Collaborators

Municipal planning staff and the planning and zoning commission should lead implementation of this action, in partnership with the governing body who may ultimately implement policy changes. Additional community collaborators include municipal residents, private and public employers and their employees, and visitors to the community to help identify parking issues in the municipality that may be addressed by the parking program.

Funding

If available, below are potential funding sources specific to this Action. For a complete listing of potential funding opportunities to assist with implementing Sustainable CT Actions, please visit the [Sustainable CT Grants Portal](#), which is searchable by Action. Please also visit the [Support for Your Town](#) page for opportunities for technical assistance and other supports.

Benefits

Strategic parking management can mitigate environmental impacts, including excessive land consumption, degraded water quality, and exacerbated heat island effects and reduce greenhouse gas emissions by encouraging alternative modes of transit. Minimizing parking structures can also reduce energy used in construction, maintenance, and operation. Having the correct balance of parking is also vital to the economic development of your community.
