

2.10 Facilitate Invasive Species Education and Management

5 Points

10 Points

15 Points

20 Points

Action Updates

This action has been revised for the **current certification cycle**. A version of this action from the prior program year is [available for comparison](#). Edits are highlighted in yellow. (Last update 2020)

Objective

Educate, plan for, and implement projects to effectively manage invasive species.

What to Do

If you collaborate with other municipalities or other stakeholders to implement this Action, please describe the partnership in the “partners” box of your submission. Please also consult this [guidance document](#) to help your municipality earn points for actions pursued in partnership. Regional collaboration and other forms of partnership are highly encouraged.

The more you do, the more points you earn.

1. Municipal Management of Invasive Species **(10 points)**

All items must be completed to receive credit.

a. Examine your regulations to ensure that your municipality is not unintentionally supporting the use of non-native species. Eliminate all invasive species from lists of acceptable plants (include a review of subdivision guides’ approved planting lists).

Submit: A description of your regulation review process, including which regulations you reviewed and how you amended them (if applicable).

b. Embed invasive species management practices into your grounds maintenance practices. Invasive species management practices should be environmentally-sound, as opposed to widespread application of herbicides and pesticides.

Submit: Your community’s plan for invasive species treatments, and include a description of how you have embedded invasive species management (practices) into your grounds maintenance practices.

c. Educate municipal grounds keeping staff on invasive species management practices utilized by your municipality.

Submit: A description, including dates provided, of the education provided to municipal grounds keeping staff.

2. Municipal Removal of Invasive Species **(5 points)**

a. Engage in invasive species management practices on municipal properties.

Submit: A description of the invasive species management practices now being employed on your

municipal properties. Include before and after photos (if possible), as well as detailed information about the area treated, when and how it was treated.

3. Residential Education **(5 points)**

All items must be completed to receive credit.

a. On your municipal website, post invasive species education resources. Provide links to sources (may be external) outlining invasive species identification and removal techniques.

Submit: A link to the invasive species education resources on your municipal website.

b. Host or sponsor an educational workshop for residents about invasive species and removal processes. In addition to general education for all residents, you may enhance chances for adoption of new land stewardship practices by targeting specific groups, like gardening clubs.

Submit: Title, date of workshop, and where possible, a description of what was covered.

Credit for Past Action

For spring certification, count back from February 1st of the current year. For fall certification, count back from August 1st of the current year. For further clarification on determining if your prior work is eligible to earn points, [click here](#).

Municipal Management of Invasive Species

- Regulation review and maintenance procedures must be current to application submission.
- Municipal grounds keeping staff education must have occurred within the past year.

Municipal Removal of Invasive Species

- Invasive species removal must have been completed within the past year.

Residential Education

- Education must be provided within the past year.

Potential Municipal and Community Collaborators

Staff from your public works, and parks and recreation departments could be helpful in implementing this action.

In addition, the following committees, community groups or agencies could help implement this action: conservation commission, local garden clubs, watershed organizations, etc.

Funding

For a complete listing of potential funding opportunities to assist with implementing Sustainable CT Actions, please visit the [Sustainable CT Grants Portal](#), which is searchable by Action. Please also visit the [Sustainable CT Resources for Certification](#) page for opportunities for technical assistance and other supports.

Why This Matters

Invasive species are non-native plants, animals and other organisms that cause harm or are likely to cause harm in the ecosystem where they are introduced, by outcompeting or displacing native species. They oftentimes are fast growing and can spread quickly, so their management requires an all-hands-on-deck approach by municipal staff and residential property owners looking out for and removing invasive species wherever possible. Examples of invasive plants in Connecticut include Oriental Bittersweet, Multiflora Rose and Winged Euonymus/Burning Bush. Invasive aquatics include Zebra Mussels and Curly Leaf Pond Weed. Insects such as the Asian Long Horned Beetle and the Emerald Ash Borer can also cause serious problems to name a few.

Public education and management of invasive species are equally critical elements of a comprehensive plan aimed at protecting native species and their habitats, leading to healthier, fully-functioning ecosystems. The dollar cost to not properly managing invasive species can be quite high, as invasive species may impact commercial fisheries, agricultural operations, and more.

Benefits

By inspiring the community to shift their land management plans, you will facilitate the establishment of small sanctuaries of native species.

Ultimately, this benefits everyone in the community by promoting cleaner air, clean and fully functioning waterways, etc.
